

BOMBSHELL

SYNOPSIS

With only two days left to go before the launch of Nanotechnology's first cancer killing drug, Buck Corgan (HENRY THOMAS, *Legends of the Fall*, *E.T.*), Chief Bio-Engineer, discovers a fatal flaw with the nanoengines.

With 48 hours left to find the bug and fix it, Buck has to convince his assistant, Malcolm (FRANK WHALEY, *Swimming With Sharks*, *Pulp Fiction*, *Broken Arrow*, *The Doors*) that the problem can be solved quickly.

But Donald (BRION JAMES, *Blade Runner*, *The Player*, *Another 48 Hours*), and the boss of Nanolab, won't any wait longer and the launch races ahead.

Driving home, Buck is kidnapped and he awakens to find that he has been operated on. Buck joins his fiancée, Angeline (MADCHEN AMICK, *Twin Peaks*, *Dream Lover*, *Stephen King's Sleep Walkers*, *Trapped in Paradise*), at the hospital where she works, but the Ultrasound scan looks normal.

The masked kidnapper sends a videophone call to Buck telling him one of his kidneys has been replaced with a synthetic sack of Nitric Acid. When Buck and Angeline's plan to trap the Kidnapper fails, Angeline is abducted.

Now Buck must deliver a package or Angeline will die.

Discovering that the Kidnapper is Malcolm, Buck tracks down Angeline and a terrifying car chase leads them to a shocking realization...

Nanotechnology is about to explode!
